## Our History

Although Vibration Solutions LLC was founded in 2004, our industry experience dates back to 1985 when Allan H. Hansen started importing the Haweka product line of wheel balancing adaptors. Allan worked tirelessly to build the Haweka brand from obscurity to market leader. He traveled over 200 days per year conducting seminars and demonstrations in tire shops and car dealers all over North America. He printed and distributed hundreds of thousands of product brochures and created Haweka's first website back when 28K modems were all the rage. The hard work paid off as Deer Corporation d/b/a Haweka North America became Haweka's largest customer by a good margin.

Sadly, in December of 2001, Deer Corporation d/b/a Haweka North America was subject to an act of industrial espionage and theft. Soon after, Allan made a break, leaving behind the company he had started and the brand he had built. Determined to leverage the knowledge he had amassed over the past 18 years, Allan started testing materials and designing products early in 2003.

## Our Company

Vibration Solutions LLC quickly became the preferred supplier for the finest vehicle and balancer manufacturers in the world. Through superior design, top-notch engineering, first class manufacturing and the best material selection, we have earned our reputation for producing the most accurate balancing adaptors on the world market.

All products are manufactured in our 10,000 square foot plant in Cornelius, North Carolina, USA. Our people are dedicated to delivering the highest quality product and the best possible customer service. To us, precision is not a goal, it's a given. We fanatically live by our slogan;  
**Insanely Accurate Products.**

*Allan, back in the day....1996*

SPEEDNUTS & PARTS

How To Order

**SpeedNut Steel - With Thrust Bearing**

Thrust Bearing (*Provides huge increase in torque without further operator effort*).

Threaded Jaw set (*Modern extra torque design*).

Ergonomic Release Lever (*Comfortable for the operator*).

Built-in Turning Handles (*Faster to use*).

Part Number: **V142-xxx-02** (*Replace xxx with balancer's thread code*).

Includes Pressure Ring

**SpeedNut Steel - With Thrust Bearing**

*Special version - Hunter*

Thrust Bearing (*Provides huge increase in torque without further operator effort*).

Threaded Jaw set (*Modern extra torque design*).

Ergonomic Release Lever (*Comfortable for the operator*).

Built-in Turning Handles (*Faster to use*).

Part Number: **V142-408-03**

Use OEM Pressure Ring and Pressure Cup

**SpeedNut Composite**

Threaded Jaw set (*Modern extra torque design*).

Ergonomic Release Lever (*Comfortable for the operator*).

Part Number: **V144-xxx-01** (*Replace xxx with balancer's thread code*).

Includes Pressure Ring

**SpeedNut Composite**

*With Turning Handles*

Threaded Jaw set (*Modern extra torque design*).

Ergonomic Release Lever (*Comfortable for the operator*).

Built-in Turning Handles (*Faster to use*).

Part Number: **V144-xxx-11** (*Replace xxx with balancer's thread code*).

Includes Pressure Ring

**Pressure Ring Turned Nylon**

Fits SpeedNut as well as competitor's QuickNut.

Turned from solid Nylon 6/6.

Best choice for steel SpeedNut/QuickNut as well as customers living at high altitude with very dry and cold weather.

Part Number: **M142-000-01**

TOP PRODUCTS

SPEEDNUTS & PARTS

How To Order

**Pressure Cup Composite**

Fits SpeedNut as well as Haweka Quicknut. Diameter 4.92" (125mm). Much stronger than competitor's which help ensure the wheel is forced straight, thereby improving balancing results. Not all Pressure Cups are made the same, but of course, CenTor Plates and SpeedPlates are a far better choice than a Pressure Cup.  
Part Number: **M140-000-02**

**Rubber Cap**

Helps to protect the finish on aluminum wheels. Used together with Pressure Cup M140-000-02.  
Part Number: **M140-000-03**

**Replacement Threaded Jaw Set**

Fits SpeedNut as well as competitor's QuickNut. Through hardened for great durability, but not as hard as the balancer's shafts, to avoid premature shaft wear. Modern design and manufacturing method provides better grip and torque than competitor's.  
Part Number: **M142-xxx-01** (Replace xxx with balancer's thread code).

PARTS			
SpeedNut & Quicknut			
	<p><b>Pressure Ring <i>Solid Turned</i></b> Fits all SpeedNuts from Vibration Solutions as well as competitor's Quicknut.</p>	<p>M140-000-01</p>	<p>\$15.20</p>
	<p><b>Pressure Cup <i>Injection Molded</i></b> Fits all SpeedNuts from Vibration Solutions as well as competitor's Quicknut. Super strong design improves balancing results over competitor more flexible design. Diameter 5" (125mm).</p>	<p>M140-000-02</p>	<p>\$18.35</p>
	<p><b>Rubber Protector Cap</b> Slips onto Pressure Cup in order to protect finish of aluminum wheels.</p>	<p>M140-000-03</p>	<p>\$9.30</p>

Shaft Diameter: For a 40mm diameter shaft use code 400, a 28.56mm (1 1/8") shaft use code 280.  
 Example: Large Truck Cone V150-400-14

Thread Type: The code is determined by the shaft diameter, the thread pitch and thread design. Code 404 means 40mm diameter with 4mm pitch, code 363 is for a 36mm shaft with 3mm pitch.  
 Example: Speednut V142-404-02

*Important note: Whereas, some balancers such as John Bean, Hofmann and many SnapOn balancers do have 40mm shaft diameters with a 4mm pitch, the thread design is custom made with a different thread angle than standard. A 404 thread will **not** work properly on any balancer that has a 405 shaft design. It will seem to work since both have a 4mm pitch, but the 404 thread will not penetrate fully into the shaft thread, resulting in great loss of torque on any QuickNut/SpeedNut and a high chance of the QuickNut/SpeedNut coming loose. It also results in premature wear. Do not mix 404 and 405 threads.*

Hub Code: Determined by the hub diameter, the hole location and sometimes the shaft design.  
 Example: SpeedPlate System V400-818-02
