L162-400-23
Side A
74mm to 74.5mm

L162-400-23
Side B
77.7mm to 78mm

For alloy wheels with plastic wheel cover!

The plastic cover is factory installed, via plastic locking tabs, on the center bore of the wheel. These plastic clad wheels come as standard equipment on vehicles from Cadillac, Chevrolet, Chrysler, Dodge, Ford, Lincoln, Jeep, Nissan, Hyundai and more are on the way.

Standard wheel balancer cones interfere with the locking tabs!

Therefore, the wheel cannot be properly centered, resulting in poor balancing results. Standard cones can even crack the locking tabs off, requiring replacement of the entire plastic cover.

Perfect fit!

The OEM Precision Collet is short and therefore will not touch the plastic tabs. No damage - no problem!

Superior Balancing Results!

The Collets have very low taper/angle providing optimum balancing results.

Double sided design!

Just flip the Collet over. Different Collets are available to fit virtually all cars, SUVs and light trucks on the world market.

SpeedPlate or CenTor Plate - It's your choice.

The OEM Precision Collets works with SpeedPlates, CenTor Plate adaptors and others.
